RANK #1 OF 5

LEADING

BOTTOM LINE

- You currently lead AI recommendation share in this set, appearing in 60% of tested assistant answers.
- That still leaves 40% with no Stanley mention.
- Each of those is missed recommendation share when buyers ask for options.
- Owala ties your mention count; Thermo Flask and hydro flask sit one to two mentions back.
- That is close enough that a focused content, entity, and citation sprint from any of them can replace your default first pick without intervention.

AN AUTHORITY REPORT

Competitive snapshot

How you rank today and the three signals we are watching in this test set.

STANLEY

April 1, 2026

COMPETITIVE RANKING

#1	Stanley		18/30	
#2	Owala		18/30	0
#3	Thermo Flask		17/30	-1
#4	hydro flask		16/30	-2
#5	Hydro Flask		2/30	-16

WIN

OpenAI strength

Score 90. Clone URL structure, schema, and citation types onto Gemini and Anthropic first.

Confidential

RISK

Fragile #1

Owala ties at 18 mentions; assistants can flip who they recommend first on the next credible proof sprint.

PRIORITY

Zero citation anchor

0% authority. Without third-party proof, wins stay negotiable and easy for rivals to contest.

Page 2

64 points from best to worst. Buyers see different short lists by assistant.

April 1, 2026

STRONGEST SURFACE

OpenAI
90

Strongest surface: this is the pattern to copy onto Gemini and Anthropic before competitors narrow the gap.

WEAKEST SURFACE

Anthropic
26

On Anthropic-powered answers, Stanley is often absent from the recommendation set. That reads as effectively invisible in many category decisions this assistant influences.

OPENAI

90

+38 vs avg

avg 52

- Strongest surface: this is the pattern to copy onto Gemini and Anthropic before competitors narrow the gap.

GEMINI

39

-13 vs avg

avg 52

- Gemini-backed answers often omit Stanley from the short list. Recommendation share on that path is going to competitors.

ANTHROPIC

26

-26 vs avg

avg 52

- On Anthropic-powered answers, Stanley is often absent from the recommendation set. That reads as effectively invisible in many category decisions this assistant influences.

CROSS-MODEL SUMMARY

Spread: 64 pts · Avg: 52

Strongest — OpenAI (90): Strongest surface: this is the pattern to copy onto Gemini and Anthropic before competitors narrow the gap.

Weakest — Anthropic (26): On Anthropic-powered answers, Stanley is often absent from the recommendation set. That reads as effectively invisible in many category decisions this assistant influences.

Representative assistant excerpts and the strategic takeaway for this snapshot.

CLIENT-READABLE EXCERPTS

EXCERPT
STRENGTH

For insulated drinkware, Stanley and Owala are frequently cited for durability and retail availability...

That is active recommendation share-refresh proof so competitors cannot erode the slot on the next model update.

EXCERPT
VULNERABLE

SUMMARY
Some assistants aggregate hydro flask variants inconsistently, which splits brand equity across listings...

COMPETITORS NAMED
Stanley, Owala, Thermo Flask, hydro flask, Hydro Flask

IMPLICATION
Close the hole with cited comparisons, FAQs for these query shapes, and third-party proof assistants retrieve.

STRATEGIC TAKEAWAY

Sixty-four points separate OpenAI from Anthropic. Buyers get different short lists depending on which assistant they use. Rebuild the weak surfaces with cited comparisons and FAQs before a competitor locks the default recommendation there.

PRIMARY ACTION

HIGH PRIORITY

Close the 64-point model spread

OpenAI scores 90 while Anthropic sits at 26.

EXPECTED OUTCOME

Target +10-15 points on trailing models within 90 days, visible as higher mention and top-position share on the next snapshot.

WHY IT MATTERS

Different assistants recommend different winners. Buyers do not get one story, and you do not control who wins the short list on each path.

WHAT WE DO

Ship 3-5 cited "vs." and category comparison pages; add direct-answer FAQ blocks for the intents Gemini and Anthropic return; align Product/Organization schema and canonical entities on those URLs.

2

HIGH PRIORITY

Win first-position, not just inclusion

Mention rate and top-position rate both read 60%.

WHY IT MATTERS

When you appear mid-list, high-intent buyers still default to whoever the assistant names first.

WHAT WE DO

Tighten headline claims and cited differentiators on money URLs; publish schema-aligned FAQs that answer the exact questions assistants paraphrase.

EXPECTED OUTCOME

Measurable lift in top-position rate on priority intents within 60-90 days.

STANLEY

April 1, 2026

3	MEDIUM PRIORITY Break the tie with Owala Owala matches 18 mentions: zero cushion on the default recommendation. WHY IT MATTERS Parity means the next credible citation or comparison asset from Owala can swap first pick. WHAT WE DO Refresh hero SKUs with proof points; secure two net-new trusted mentions (reviews, trade press, or category authorities) assistants can cite.	EXPECTED OUTCOME Open a 3-5+ mention cushion on head to-head queries within a quarter.
4	LOW PRIORITY Consolidate Hydro Flask entity variants Lower-case and upper-case hydro flask rows split the signal. WHY IT MATTERS Split entities dilute how models aggregate your equity in category answers. WHAT WE DO Align canonical naming, sameAs, and product schema sitewide; redirect or consolidate duplicate listings.	EXPECTED OUTCOME Cleaner single-entity consolidation in aggregated assistant answers over time.

Execution plan

STANLEY

How we operationalize this snapshot: discovery, rebuild, proof, then measured iteration.

April 1, 2026

STEP 1 — AUDIT FOUNDATION

WHAT WE EXECUTE

We audit structured content, schema, entity consistency, and citation gaps; benchmark competitor proof so priorities are explicit.

STEP 2 — FIX WEAKEST MODEL

WHAT WE EXECUTE

We rebuild Anthropic and Gemini surfaces first-shipped comparison pages, FAQs, and schema aligned to how those assistants retrieve.

STEP 3 — BUILD AUTHORITY

WHAT WE EXECUTE

We expand authority through reviews, trade press, and trusted third-party mentions assistants can cite; defend OpenAI with fresh proof.

STEP 4 — RE-MEASURE & ITERATE

WHAT WE EXECUTE

We re-measure with the next snapshot, read deltas by model, and lock the following 30-day sprint.

Data summary

STANLEY

What the tables imply before you scan the rows. The numbers below quantify each signal.

April 1, 2026

Stanley leads the mention table, but Owala is tied and the next brands sit one to two mentions back. This is a contested default, not a locked win. Forty percent of answers omit you entirely, and citation coverage is 0%, so assistants have little third-party proof to anchor you ahead.

SIGNALS

SIGNAL	COUNT	RATE	STATUS	ACTION
● Strength (top + strong rec.)	18	60%	POSITIVE	Hold position
● Mentioned (not top)	0	0%	IMPROVABLE	Win top slot
● Vulnerable (not mentioned)	12	40%	GAP	Build presence
● Authority (citations)	0	0%	TRUST	Earn citations

COMPETITIVE SET

BRAND	MENTIONS	#	RATE	VS.STATUS
Stanley		18	60%	- YOU
Owala		18	60%	0 TIED
Thermo Flask		17	57%	-1 BEHIND
hydro flask		16	53%	-2 BEHIND
Hydro Flask		2	7%	-16 BEHIND

REPORT DATE

WHAT HAPPENS NEXT

We execute this as an ongoing program - not a one-time report.

Over the next 30-90 days, we will:

- Prioritize the highest-impact fixes identified in this report
- Rebuild weak model surfaces (starting with Anthropic)
- Expand citation and authority signals
- Re-measure performance across models

Each snapshot tracks progress and informs the next set of actions.
